

More information about coronavirus vaccinations

Health experts agree that vaccinations play a critical role in the long-term health and safety of our local communities, and in broad-based efforts to control the spread of the coronavirus.

Bank of America is creating robust tools and resources to help employees learn more and plan how to receive a vaccination, with the support and guidance of personal healthcare providers. This is consistent with our overall approach to investing in the wellbeing of our teammates, clients and communities.

Time off for coronavirus vaccination appointments

All U.S. employees will have the option to use two half days (up to four hours each) of paid time off to complete coronavirus vaccination appointments in 2021. This approach reflects that current coronavirus vaccines will require two doses. As the distribution protocol and availability of vaccines evolve, we will review and update this policy as appropriate. You can read more about the policy by visiting [Flagscape](#).

Let us know as soon as you've been vaccinated

After you've been vaccinated, please ensure you have completed the [Vaccination Status](#) tool. This information is critical to our ongoing, broad-based efforts to understand and respond to the needs of the organization. Of course, we will keep this information confidential. If your vaccination includes two doses, please update the tool after receiving each dose, including uploading an image of your vaccination card each time. Visit [Flagscape](#) to access more information about the Vaccination Status tool, including which countries can access the tool.

As always, you should consult with your health care provider if you have any questions about your health, including COVID-19 vaccinations.

For more information about the vaccine

Visit the [COVID-19 Vaccine page](#) on the Centers for Disease Control and Prevention (CDC) website for more information about the vaccine, including what to expect before and after receiving the vaccine, and answers to common questions.

Information is available on the CDC website in English, Spanish and additional languages for your convenience by choosing from the drop down menu "Languages" on each page.
